Hi,

The hackathon is getting closer, and we're excited to get started! To help you prepare, you can now explore the dataset and notebook that will be used during the event. You can access the material via the link below:

https://drive.google.com/drive/folders/1GSE77SHyHBka7NQTWVI1DYOpzpx6l2-7u?usp=drive_link.

Feel free to dive in ahead of time to get a sense of the data and setup—it might even give you a head start 😊

If you have any questions, don't hesitate to reach out. We're really looking forward to seeing what you'll create at the hackathon!

Best regards,
The Hackathon Team

Hi,

I'm preparing for the Digital Earth Sweden Hackathon (4–5 June) on the Critical Infrastructure Monitoring track, with a focus on Baltic Sea shadow-fleet activity.

The prep notebook ships land-based events (Stenungsund landslide, Kårböle wildfire). Before 21 May I'd like to scope my pre-event work and would appreciate clarification on what maritime data, if any, will be provided on-site:

1. Will Sentinel-1 SAR tiles over the Baltic (e.g. Gulf of Finland, Swedish EEZ cable corridors) be pre-staged in the same NetCDF format as the prep dataset?
2. Is there flexibility to request a specific AOI and time window (for example, around known incident dates) before the event?

If maritime imagery isn't in scope, I'll plan to fetch it myself via Copernicus DSE / openEO on day one.

Thanks,
NV

Hi Nicolò,

Great that you have a use-case you want to work with. Just a heads-up: As of now we will not provide any data specifically connected to shadow-fleets. It is great that you plan to come prepared to fetch your own data. Christian Roos from Saab had a talk on GAIA last year with a similar topic: <https://www.youtube.com/watch?v=x4G6pZV30fw>.

1. The format might change for storage reasons. I will get back to you when I know the format. However, you will be able to build datacubes and work with those as in the example.
2. No, unfortunately we can't provide requested AOIs and time windows.

Looking forward to seeing you at the Hackathon!

Best regards,
The Hackathon team
